source code :

index.js file :

The screenshot shows a VS Code editor window with the following components:

- EXPLORER:** A file tree on the left showing a project structure with folders like 'api', 'controllers', 'db', 'model', 'routers', and 'client'. The file 'JS index.js' is selected under the 'api' folder.
- EDITOR:** The main area displays the content of 'JS index.js'. The code includes imports for 'path', 'express', 'dotenv', 'connectToDB', and 'userRoute'. It sets up an Express app, uses 'express.json()', 'express.static()', and 'userRoute'. It also includes a GET route for '/api/user' and a static route for '/client/dist'. The app listens on PORT 5000 and logs the server status.
- TERMINAL:** The bottom panel shows the output of running 'nodemon api/index.js'. The output includes the Node.js version (3.1.0), the path being watched, and the message 'Server is running on PORT : 5000' and 'DB connected successfully'.

MONGODB CONNECTION :

The screenshot shows the VS Code editor with the file explorer on the left. The file explorer shows a project structure with folders like api, controllers, db, model, routers, and user.routes.js. The file connectToDB.js is selected in the db folder. The main editor shows the code for connectToDB.js, which imports mongoose and defines a connectToDB function. The terminal at the bottom shows the command 'nodemon api/index.js' and the output, which includes the message 'DB connected successfully'.

```
api > db > JS connectToDB.js > connectToDB
1 import mongoose from 'mongoose';
2
3 export function connectToDB(){
4   mongoose.connect(process.env.CONN_STR)
5   .then(()=>{
6     console.log("DB connected successfully")
7   })
8   .catch((err)=>{
9     console.log("Error while connecting to DB : ",err.message);
10  })
11 }
```

```
> nodemon api/index.js

[nodemon] 3.1.0
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting `node api/index.js`
Server is running on PORT : 5000
DB connected successfully
```

MODEL :

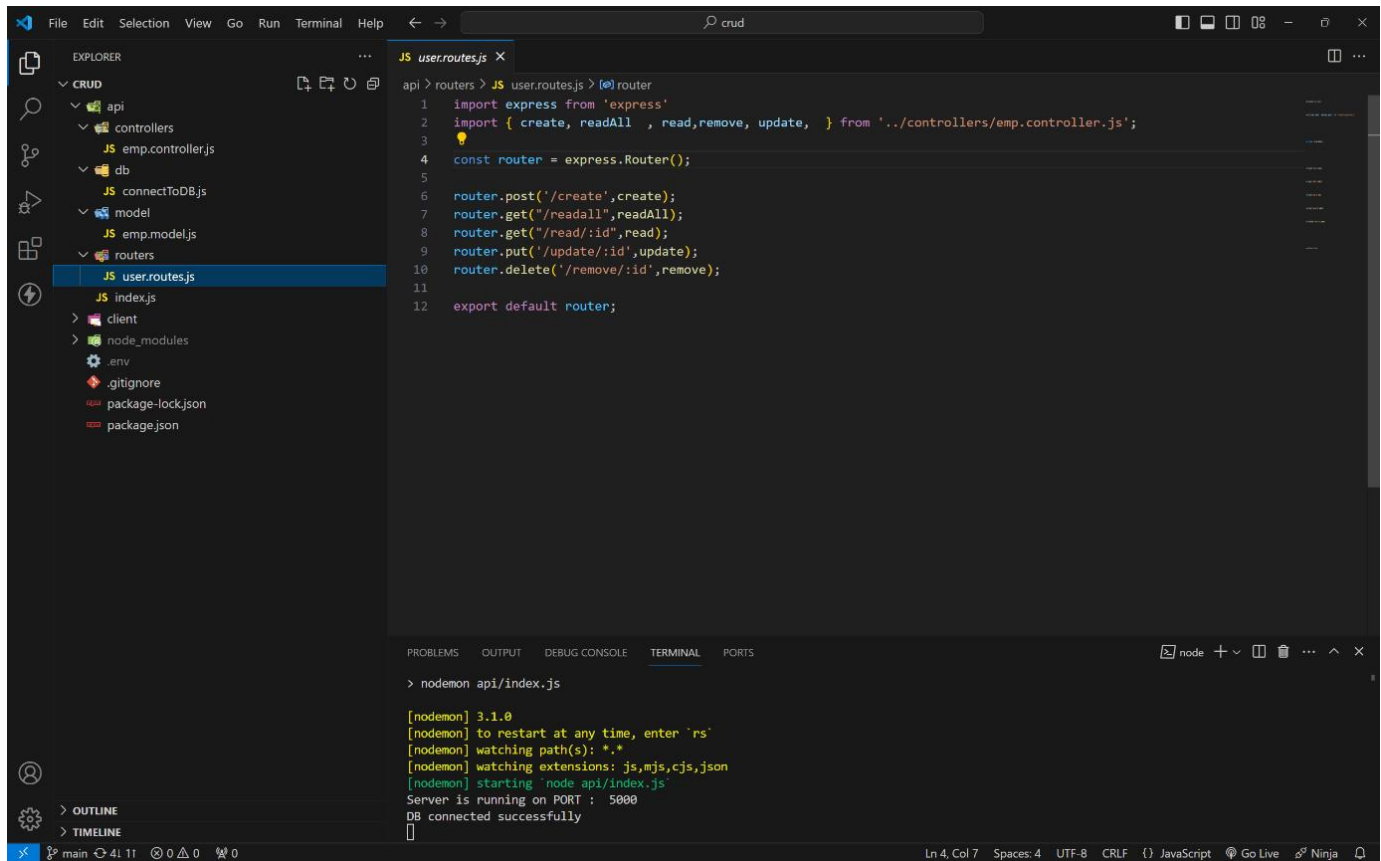

The screenshot shows the VS Code editor with the file explorer on the left. The file explorer shows a project structure with folders like api, controllers, db, model, routers, and user.routes.js. The file emp.model.js is selected in the model folder. The main editor shows the code for emp.model.js, which imports mongoose and defines a userSchema. The terminal at the bottom shows the command 'nodemon api/index.js' and the output, which includes the message 'DB connected successfully'.

```
api > model > JS emp.model.js > userSchema > role
1 import mongoose from 'mongoose';
2
3 const userSchema = new mongoose.Schema({
4   username:{
5     type:String,
6     unique:true,
7     required:true
8   },
9   empname:{
10    type:String,
11    required:true
12  },
13  email:{
14    type:String,
15    required:true
16  },
17  role:{
18    type:String,
19    required:true
20  },
21  salary:{
22    type: Number,
23    required: true,
24  }
25 },{timestamps:true})
26
27 const Emp = mongoose.model("User",userSchema);
28
29 export default Emp;
```

```
> nodemon api/index.js

[nodemon] 3.1.0
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting `node api/index.js`
Server is running on PORT : 5000
DB connected successfully
```

ROUTES:

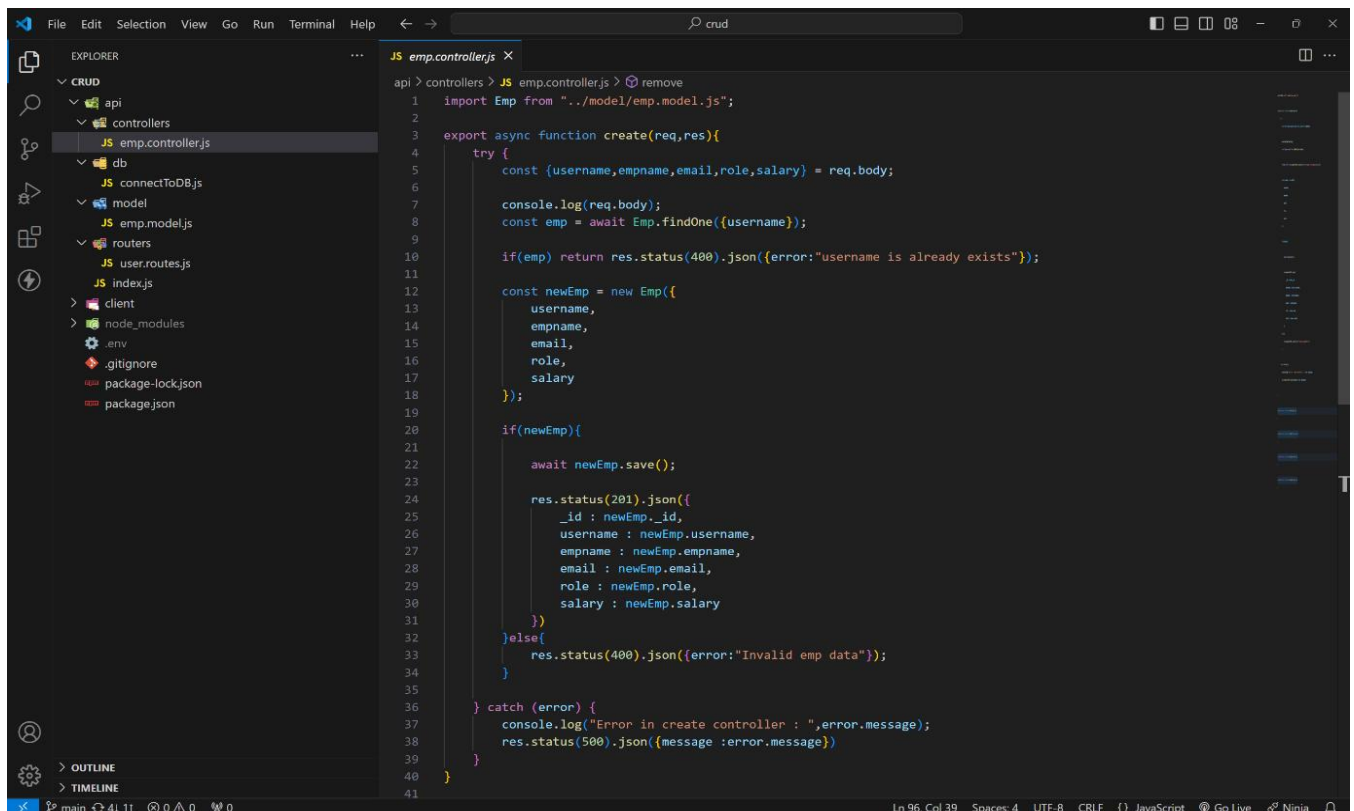

The screenshot shows the Visual Studio Code editor with the file explorer on the left. The file explorer shows a project structure with folders like 'api', 'controllers', 'db', 'model', 'routes', and 'client'. The 'routes' folder is expanded, and 'user.routes.js' is selected. The main editor displays the content of 'user.routes.js', which defines an Express router with routes for creating, reading, updating, and deleting users. The terminal at the bottom shows the command 'nodemon api/index.js' being executed, and the output indicates that the server is running on port 5000 and the database is connected successfully.

```
api > routers > JS user.routes.js > @router
1 import express from 'express'
2 import { create, readAll, read, remove, update, } from '../controllers/emp.controller.js';
3
4 const router = express.Router();
5
6 router.post('/create', create);
7 router.get("/readall", readAll);
8 router.get("/read/:id", read);
9 router.put('/update/:id', update);
10 router.delete('/remove/:id', remove);
11
12 export default router;
```

```
> nodemon api/index.js

[nodemon] 3.1.0
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting 'node api/index.js'
Server is running on PORT : 5000
DB connected successfully
```

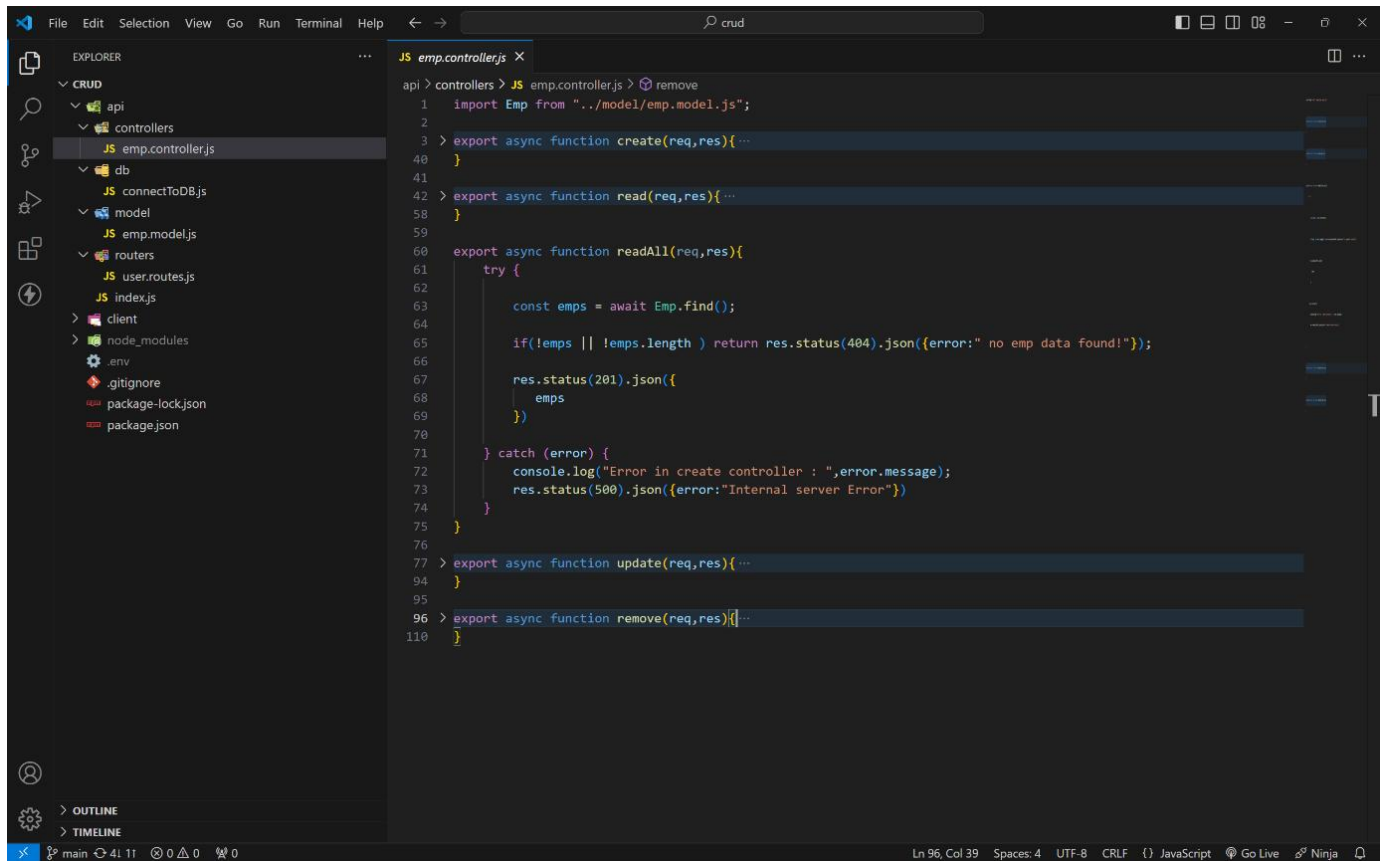

CONTROLLERS : CREATE :

The screenshot shows the Visual Studio Code editor with the file explorer on the left. The file explorer shows a project structure with folders like 'api', 'controllers', 'db', 'model', 'routes', and 'client'. The 'controllers' folder is expanded, and 'emp.controller.js' is selected. The main editor displays the content of 'emp.controller.js', which defines an asynchronous function 'create' that takes a request and a response object as arguments. The function checks if a user with the same username already exists in the database. If it does, it returns a 400 status code with an error message. If it doesn't, it creates a new user object and saves it to the database, returning a 201 status code with the user details. The function also includes error handling for database operations.

```
api > controllers > JS emp.controller.js > remove
1 import Emp from "../model/emp.model.js";
2
3 export async function create(req,res){
4   try {
5     const {username,empname,email,role,salary} = req.body;
6
7     console.log(req.body);
8     const emp = await Emp.findOne({username});
9
10    if(emp) return res.status(400).json({error:"username is already exists"});
11
12    const newEmp = new Emp({
13      username,
14      empname,
15      email,
16      role,
17      salary
18    });
19
20    if(newEmp){
21
22      await newEmp.save();
23
24      res.status(201).json({
25        _id : newEmp._id,
26        username : newEmp.username,
27        empname : newEmp.empname,
28        email : newEmp.email,
29        role : newEmp.role,
30        salary : newEmp.salary
31      });
32    }else{
33      res.status(400).json({error:"Invalid emp data"});
34    }
35
36  } catch (error) {
37    console.log("Error in create controller : ",error.message);
38    res.status(500).json({message :error.message});
39  }
40 }
41
```

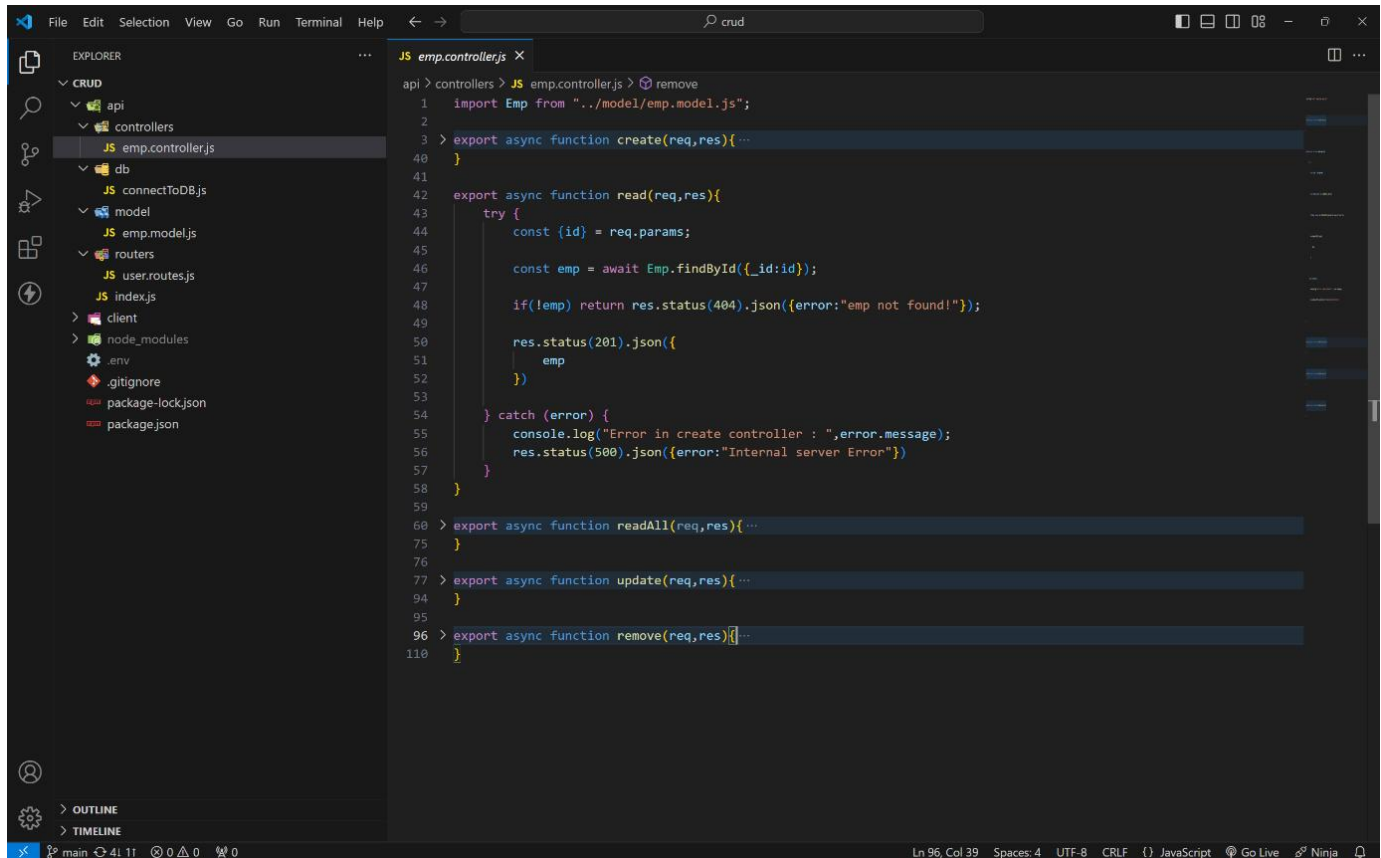

READALL:

The screenshot shows the VS Code editor with the file explorer on the left and the code editor in the center. The file explorer shows a project structure with a 'crud' folder containing 'api', 'controllers', 'db', 'model', 'routers', and 'index.js'. The 'api' folder contains 'emp.controller.js'. The code editor shows the implementation of the 'readAll' function in 'emp.controller.js'.

```
api > controllers > JS emp.controller.js > remove
1  import Emp from "../model/emp.model.js";
2
3  > export async function create(req,res){ ...
40 }
41
42 > export async function read(req,res){ ...
58 }
59
60 export async function readAll(req,res){
61   try {
62     const emps = await Emp.find();
63
64     if(!emps || !emps.length) return res.status(404).json({error:" no emp data found!"});
65
66     res.status(201).json({
67       emps
68     })
69   }
70 }
71 } catch (error) {
72   console.log("Error in create controller : ",error.message);
73   res.status(500).json({error:"Internal server Error"})
74 }
75 }
76
77 > export async function update(req,res){ ...
94 }
95
96 > export async function remove(req,res){ ...
110 }
```

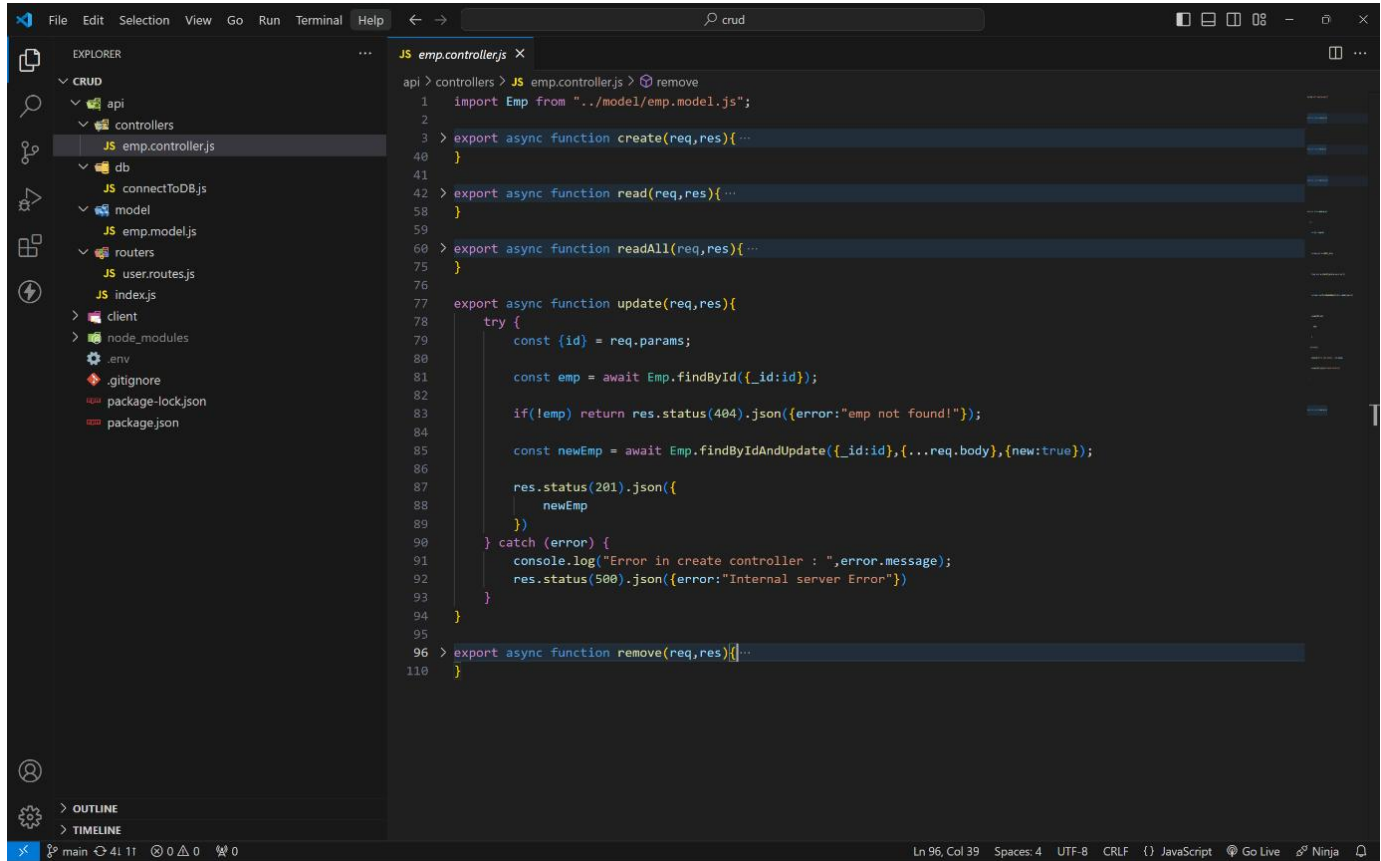

READONE :

The screenshot shows the VS Code editor with the file explorer on the left and the code editor in the center. The file explorer shows a project structure with a 'crud' folder containing 'api', 'controllers', 'db', 'model', 'routers', and 'index.js'. The 'api' folder contains 'emp.controller.js'. The code editor shows the implementation of the 'read' function in 'emp.controller.js'.

```
api > controllers > JS emp.controller.js > remove
1  import Emp from "../model/emp.model.js";
2
3  > export async function create(req,res){ ...
40 }
41
42 export async function read(req,res){
43   try {
44     const {id} = req.params;
45
46     const emp = await Emp.findById({_id:id});
47
48     if(!emp) return res.status(404).json({error:"emp not found!"});
49
50     res.status(201).json({
51       emp
52     })
53   }
54 } catch (error) {
55   console.log("Error in create controller : ",error.message);
56   res.status(500).json({error:"Internal server Error"})
57 }
58 }
59
60 > export async function readAll(req,res){ ...
75 }
76
77 > export async function update(req,res){ ...
94 }
95
96 > export async function remove(req,res){ ...
110 }
```

UPDATE :

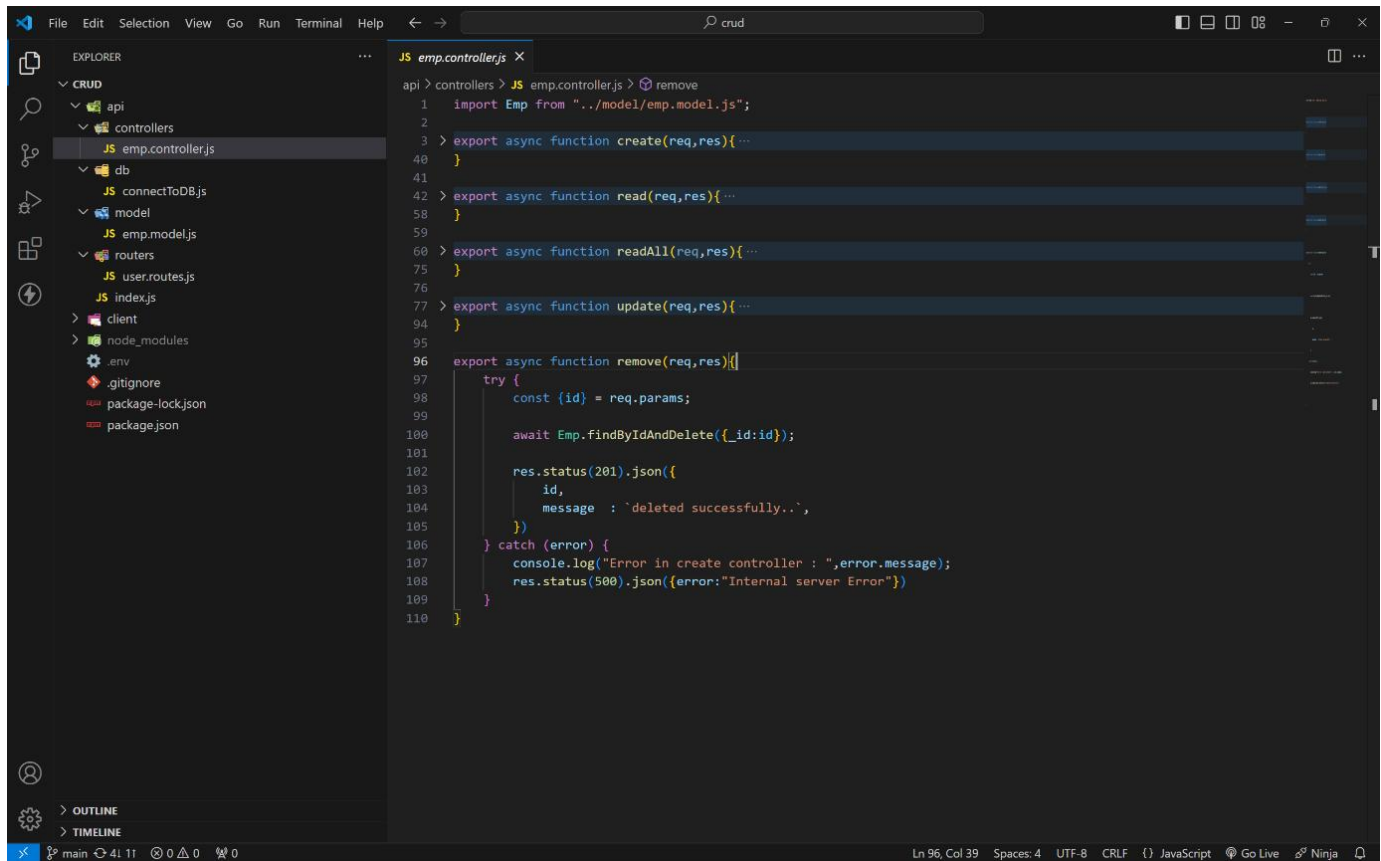

The screenshot shows a VS Code editor window with the file explorer on the left and the code editor in the center. The file explorer shows a project structure with folders like 'api', 'controllers', 'db', 'model', 'routers', and 'index.js'. The code editor displays the 'emp.controller.js' file, which contains the following code:

```
api > controllers > JS emp.controller.js > remove
1  import Emp from "../model/emp.model.js";
2
3  > export async function create(req,res){...
40 }
41
42 > export async function read(req,res){...
58 }
59
60 > export async function readAll(req,res){...
75 }
76
77 export async function update(req,res){
78   try {
79     const {id} = req.params;
80
81     const emp = await Emp.findById({_id:id});
82
83     if(!emp) return res.status(404).json({error:"emp not found!"});
84
85     const newEmp = await Emp.findByIdAndUpdate({_id:id},{...req.body},{new:true});
86
87     res.status(201).json({
88       newEmp
89     });
90   } catch (error) {
91     console.log("Error in create controller : ",error.message);
92     res.status(500).json({error:"Internal server Error"})
93   }
94 }
95
96 > export async function remove(req,res){...
110 }
```

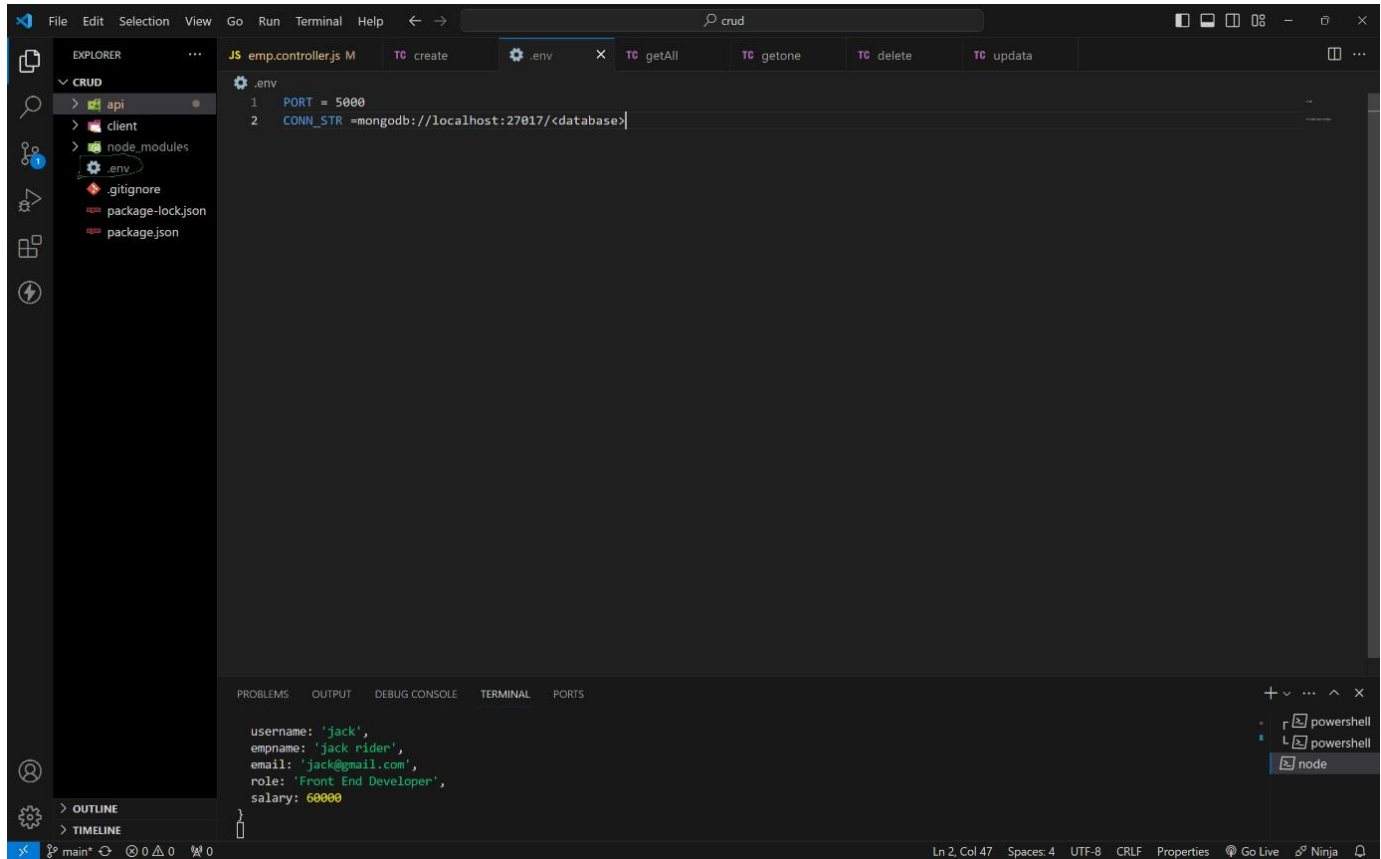

The status bar at the bottom indicates the file is at line 96, column 39, with 4 spaces, UTF-8 encoding, and CRLF line endings. The language is set to JavaScript.

DELETE :

HOW TO RUN ON LOCALLY :

- 1 . Create a folder as any name.
- 2 . Open that folder in any code editor (vs code).
- 3 . Open terminal (ctrl + ~) on code editor.
- 4 . Type this code to get code locally. git clone <https://github.com/4727yesuraju/crud.git>
- 5 . Now move to crud folder (cd crud in terminal)
- 6 . Ignore client folder.
- 7 . Here crud is root folder.
- 8 . In root folder create a .env file and create a PORT and CONN_STR variables and assign value.
ex : PORT = 3000 (commonly any number between 3000 - 8080).
CONN_STR = your mongodb_connection_string

--- trouble in above process ? :

simply paste this code in .env file .

PORT = 5000

CONN_STR=mongodb+srv://4727yesuraju:rough@cluster0.wbclvtg.mongodb.net

/?retryWrites=true&w=majority&appName=Cluster0

9 . After in terminal (in crud folder as root folder) type this command to server.

npm i (installing all dependencies)

npm run dev (to run server)

10 . if you get below message in terminal then your server will running Successfully

```
PS C:\Users\4727y\OneDrive\Desktop\internshala\crud> npm run dev

> crud@1.0.0 dev
> nodemon api/index.js

[nodemon] 3.1.0
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting `node api/index.js`
Server is running on PORT : 5000
DB connected successfully
```

route and its functionality :

For this use any API using tools like Postman or Thunder Client.

i use THUNDER CLIENT.

CREATE ROUTE :

1 . This route is used to create a new employee in database with a below fields.

username, empname, email, role, salary

2 . in thunder client click on new request and select this options method as post

url as http://localhost:5000/api/user/create

pass this json data as a body as your required value.

```
{  
  "username": "jack",  
  "empname": "jack rider",  
  "email": "jack@gmail.com",  
  "role": "Front End Developer",  
  "salary": 60000  
}
```

3 . finally press send to insert data in mongodb data base and get a inserted data as a response.

4 . If user is already in db it will return User is already exist as response.

for more details visit below output images...

READONE :

1 . This route is used to read specific user info by passing that user id as a param.

method as get

url as

http://localhost:5000/api/user/read/65ed7b3d76e1dcc9a51654ca

2 . After sending you will get that specific user details as response.

READALL :

1 . Read all route is used to get all the user data existing in the mongodb data base .

method as get

url as `http://localhost:5000/api/user/readall`

2 . After sending you will get that all user details as response.

UPDATE :

1 . This route is used to update specific user by passing that user id as a param. method as put

url as `http://localhost:5000/api/user/update/65ed7b3d76e1dcc9a51654ca`

2 . After sending you will get updated user details as response.

DELETE :

1 . This route is used to delete specific user by passing that user id as a param. method as delete

url as

`http://localhost:5000/api/user/delete/65ed7b3d76e1dcc9a51654ca`

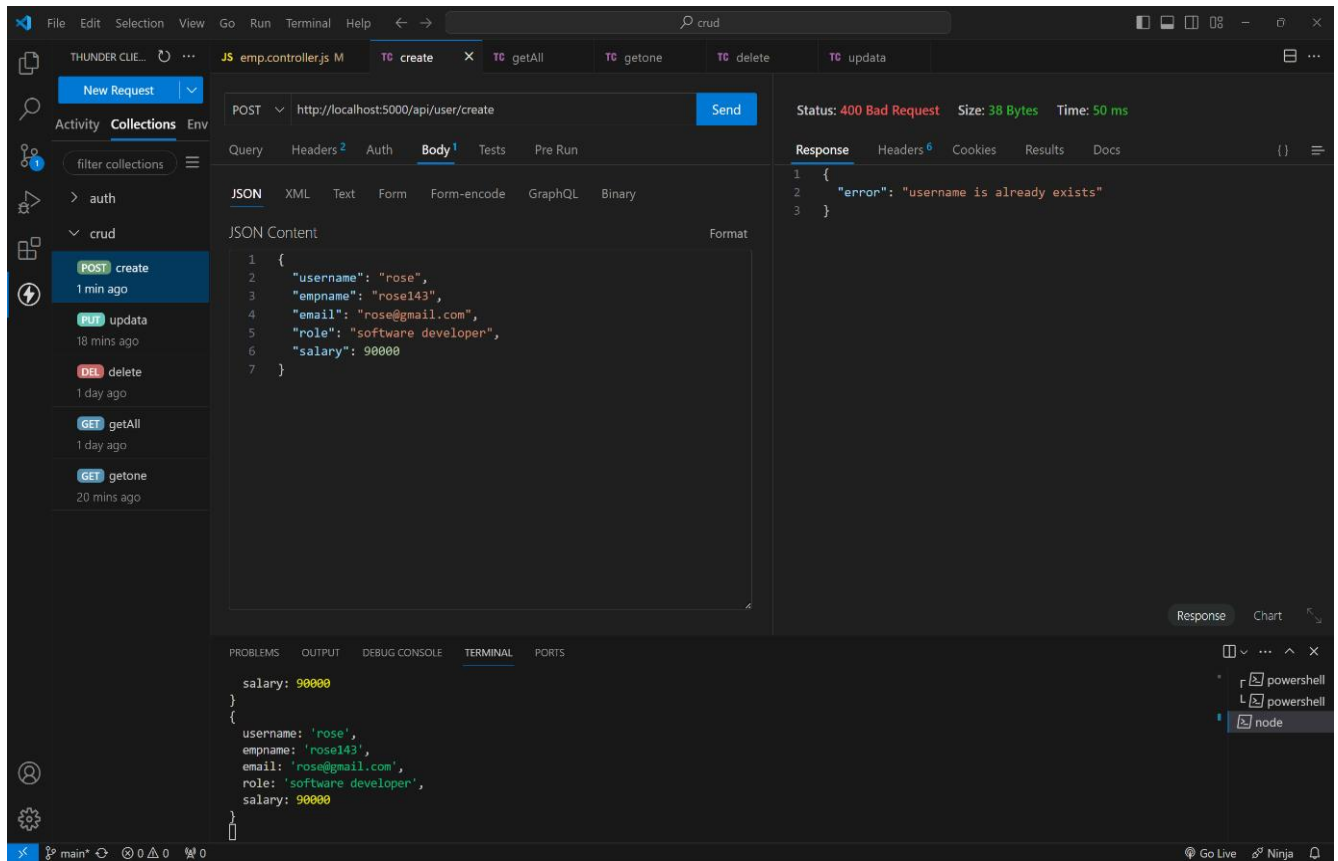

2 . After sending you will deleted successfully as response.

OUTPUT :

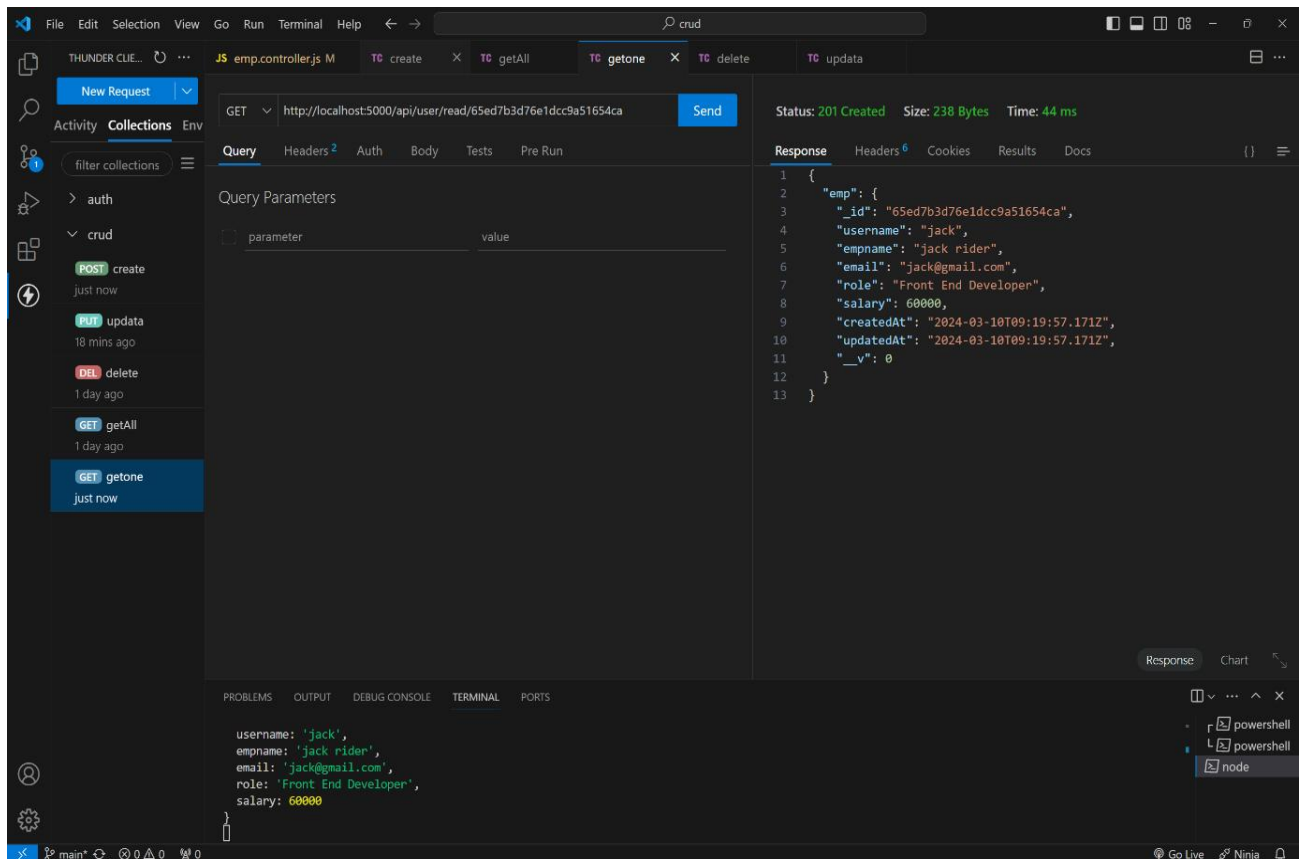

CREATE A NEW USER :

The screenshot displays the Thunder Client interface with a REST client tab open. The request is a POST to `http://localhost:5000/api/user/create`. The JSON body contains user details: `{ "username": "rose", "empname": "rose143", "email": "rose@gmail.com", "role": "software developer", "salary": 90000 }`. The response status is 201 Created, with a size of 140 Bytes and a time of 241 ms. The response body is a JSON object: `{ "_id": "65ed7a9d76e1dcc9a51654c6", "username": "rose", "empname": "rose143", "email": "rose@gmail.com", "role": "software developer", "salary": 90000 }`. The bottom panel shows the terminal with error messages: `Error in create controller : Cast to ObjectId failed for value "{ _id: '65ed625bbd510e515f6767d' }" (type Object) at path "_id" for model "User"` and `Error in create controller : Cast to ObjectId failed for value "{ _id: '65ed625bbd510e515f6767d' }" (type Object) at path "_id" for model "User"`. The status bar at the bottom indicates the application is running on port 5000.

CREATING USER WITH EXISTING USERNAME :

READONE :

READ ALL :

The screenshot shows the Thunder Client interface with a collection named 'crud'. The 'getAll' request is selected, showing a GET request to `http://localhost:5000/api/user/readall`. The response is a JSON array of two employee objects. The status is 201 Created, size is 468 Bytes, and time is 130 ms.

```
GET http://localhost:5000/api/user/readall
```

Query Parameters

parameter	value
-----------	-------

Response

```
1 {
2   "emps": [
3     {
4       "_id": "65ed7a9d76e1dcc9a51654c6",
5       "username": "rose",
6       "empname": "rose143",
7       "email": "rose@gmail.com",
8       "role": "software developer",
9       "salary": 90000,
10      "createdAt": "2024-03-10T09:17:17.904Z",
11      "updatedAt": "2024-03-10T09:17:17.904Z",
12      "__v": 0
13    },
14    {
15      "_id": "65ed7b3d76e1dcc9a51654ca",
16      "username": "jack",
17      "empname": "jack rider",
18      "email": "jack@gmail.com",
19      "role": "Front End Developer",
20      "salary": 60000,
21      "createdAt": "2024-03-10T09:19:57.171Z",
22      "updatedAt": "2024-03-10T09:19:57.171Z",
23      "__v": 0
24    }
25  ]
26 }
```

Terminal

```
username: 'jack',
empname: 'jack rider',
email: 'jack@gmail.com',
role: 'Front End Developer',
salary: 60000
}
```

UPDATE :

The screenshot shows the Thunder Client interface with a collection named 'crud'. The 'update' request is selected, showing a PUT request to `http://localhost:5000/api/user/update/65ed7b3d76e1dcc9a51654ca`. The request body is a JSON object. The response is a JSON object with the updated employee data. The status is 201 Created, size is 246 Bytes, and time is 213 ms.

```
PUT http://localhost:5000/api/user/update/65ed7b3d76e1dcc9a51654ca
```

JSON Content

```
1 {
2   "empname": "jack rider",
3   "email": "jack123@gmail.com",
4   "role": "MERN STACK Developer",
5   "salary": 100000
6 }
```

Response

```
1 {
2   "newEmp": {
3     "_id": "65ed7b3d76e1dcc9a51654ca",
4     "username": "jack",
5     "empname": "jack rider",
6     "email": "jack123@gmail.com",
7     "role": "MERN STACK Developer",
8     "salary": 100000,
9     "createdAt": "2024-03-10T09:19:57.171Z",
10    "updatedAt": "2024-03-10T09:22:55.106Z",
11    "__v": 0
12  }
13 }
```

Terminal

```
empname: 'jack rider',
email: 'jack@gmail.com',
role: 'Front End Developer',
salary: 60000
}
Error in create controller : Cast to ObjectId failed for value "{ _id: '65ed625bbd510e515f6767d' }" (type Object) at path "_id" for model "User"
```

DELETE :

The screenshot displays the Thunder Client interface with a DELETE request configured and executed. The request is sent to `http://localhost:5000/api/user/remove/65ed7b3d76e1dcc9a51654ca`. The response is a 201 Created status with a JSON body: `{ "id": "65ed7b3d76e1dcc9a51654ca", "message": "deleted successfully.." }`. The terminal at the bottom shows the server logs, indicating a successful database connection and server startup.

Request Details:

- Method: DELETE
- URL: `http://localhost:5000/api/user/remove/65ed7b3d76e1dcc9a51654ca`
- Status: 201 Created
- Size: 68 Bytes
- Time: 111 ms

Response Body:

```
1 {
2   "id": "65ed7b3d76e1dcc9a51654ca",
3   "message": "deleted successfully.."
4 }
```

Terminal Output:

```
Node.js v20.11.0
[nodemon] app crashed - waiting for file changes before starting...
[nodemon] restarting due to changes...
[nodemon] starting 'node api/index.js'
Server is running on PORT : 5000
DB connected successfully
```
